
Two selected examples from Ext-Hybrid: conversation, memories, and query
Example #149: single-session-assistant
Correctly answered example
✓ correct
query→nearest memory
cosine dist = 0.21
conversation turns
extracted memories
15 query-closest memories
test query
t-SNE 1
t-SNE 2
Example #222: multi-session
Incorrectly answered example
✗ wrong
query→nearest memory
cosine dist = 0.62
t-SNE 1
t-SNE 2
(a) Illustrative t-SNE projection. 2-D distances do not preserve original cosine distances
(b) Sorted original-space query-to-memory distances for these examples
K=15
cosine distance
query → memory
1.0
0.8
0.6
0.4
0.2
#149 (correct)
#222 (wrong)
10^0
10^1
10^2
10^3
memory rank (sorted by cosine distance to the query)
